Then note the Product ID and Vendor ID (circled in red) We will be adding these to the driver.. This is because the vendor provided drivers always seem to be out of date However, the drivers from Prolific don't work with all cables out of the box.. Linux Kernel 2.4.31 and above already includes built-in drivers for PL-2303 (VID067B&PID2303).

I'm going to show you how to fix that 1 Get the DriverIf you haven't already, hop over to the Prolific site to download the driver and install it.. The one pictured in the article is manufactured by Prolific, but sold by multiple different vendors.. The driver for the chip used by Cisco is conveniently included in OS X, but the FTDI and Prolific chips require their own drivers.. It should look something like this: Watch for the Manufacturer (circled in blue).

This PL2303 chip is used in various devices like usb serial dongles and embedded USB bridges in cellphones, GPS receivers, etcetera.. The best drivers for the Prolific come directly from the manufacturer, not the vendors that resell them.. Here's the URL at the time of this writing:If you are running OS X Yosemite, you may need to read this article to get the driver working: OS X Yosemite and Prolific USB Drivers.. 2 Discover Magic NumbersOK, the numbers aren't really magic, but the driver will need them so that it can be associated with your USB device.
